

How to take care of your Stained Wood Furniture

1. Always test a small area before cleaning, approx 1x1 in a inconspicuous area to make sure it will not harm the finish.
2. Always avoid the use furniture polishes, dusting sprays or oil soaps as they may contaminate the finish for future recoating.
3. Use a water dampened cloth for regular cleaning.
4. When cleaning, always wipe with the grain of the wood.
5. It's important to use coasters / pot holders to protect your furniture from standing water and heat.
6. Although the piece is moisture resistant, leaving standing liquid for an extended period of time WILL cause damage.
7. Overtime your piece will wear and tear naturally, depending on how its cared for. When it comes time to needing recoating, I can either: 1. Refer you to a local hardware store to get some reasonably wood sealer 2. Contact me with your name, location and a description of what you need done and I can send you a quote for a service call.

THANK YOU!
